Council for Tobacco Research - USA Inc.  
900 Third Avenue  
New York, NY 10022

At the suggestion of Mr. Daniel A. Conforti, Public Information Director of the American Brands, Incorporated, I am directing this letter to your attention for consideration and evaluation.

Dear Members of the Council,

I have been doing cancer research for over twenty-five years. I have reached a point now in my research efforts whereby further progress is at a stand still because of limited funds available to me at North Detroit General Hospital.

I am convinced that I have uncovered the suspect factor that is the key element in the etiology as well as the cause for the continued viability of the malignant cell.

I feel this factor could be isolated scientifically but it will require more funds and expertise than I can do at North Detroit General Hospital.

I am asking for help because I believe this factor if it can be isolated and identified may or can contribute to the eradication of this dreaded disease. Isolating and uncovering this important factor, along with your financial and personnel assistance, ultimately can lead, I believe, to a tremendous acclaim and financial reward to your organization.

Enclosed is a pamphlet that presents excerpts and comments on my research studies. Hope I have evoked enough interest to hear from you one way or another.

Sincerely and gratefully,

*Milton W White, M.D.*
